| NAOKS Reborn	Q1			
	January	February	March	April
PiBeri				
Iteration 1				
Iteration 3				
Iteration 3				
Iteration 4				
Iteration 5				

Iteration 1. First iteration will contains basic functionality: creating, updating and reading car ads, users will be able to rent a car by calling a phone number from ads. Gmail accounts will be used for logging into our app. UI will represent basic functionality with flutter. Backend logic will be only with dart and firebase db technologies for fast development MVP(Minimal Valuable Product).

Iteration 2. User will have personal profile in our app.
Will be added chat for communication between Client & Owner, also requesting car process. Backend logic will migrate to .Net and MS SQL Server.
